Gambrel Restrainer Application

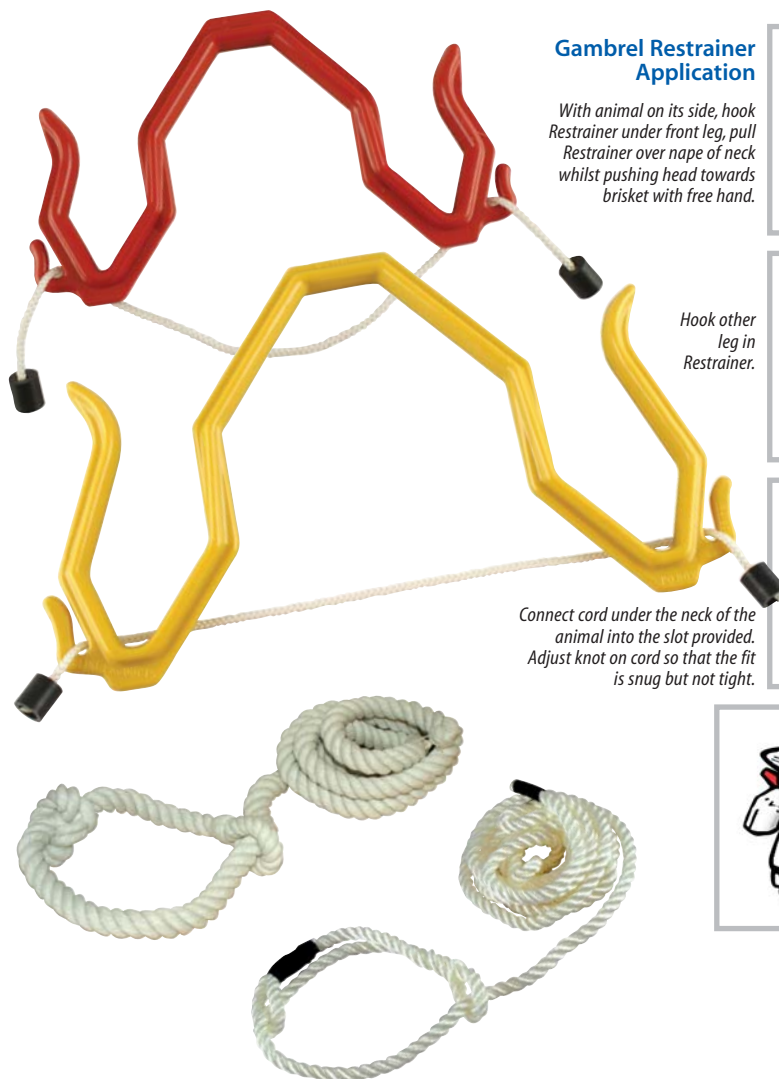

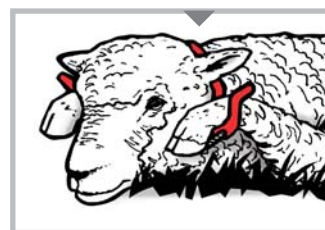

With animal on its side, hook Restrainer under front leg, pull Restrainer over nape of neck whilst pushing head towards brisket with free hand.

Hook other leg in Restrainer.

Connect cord under the neck of the animal into the slot provided. Adjust knot on cord so that the fit is snug but not tight.

MATINGMARK™

Ram/Tup Crayons,
a world leading design.

- **Fast and Simple 'click in' crayon change**
- **Wide, comfortable and durable straps with brisket mould for snug fit**
- **Fast and simple 'snap lock' buckles and easy strap length adjustment**
- **Convenient buckles to secure loose strap ends**
- **Low walls on crayon holder for better crayon usage**
- **Certified as wool scourable in New Zealand, the UK and Australia.**

The **MATINGMARK™** Ram Crayon System has been designed for both comfort and ease of use. Crayons 'click in' and out of the harness with no fiddly cotter pins.

Crayons leave a bright, clear mark to assist with flock management and track ram activity.

Mating Mark crayons are available in Cold, Mild and All Weather variants and in Blue, Green, Orange, Purple, Red and Yellow. COLD crayons are softer for use in temperatures below 16°C. MILD crayons are for

temperatures warmer than this. The usable life of the crayon, the amount of mark desired and duration of the mark should be considered when choosing between MILD and COLD. Each crayon will generally last at least two weeks but is affected by temperature and ram activity.

Crayon marking is an extremely useful management tool which can be used to track parentage, service dates and cycle identification.
